Weekly Webinar Schedule

Module Overview(Tentative):

- Number bases used in Computer Science
- Boolean logic
- Computer system architecture
- Operating systems: Components, services, and utilities
- Memory and file management
- Scripting and shell programming
- Virtualisation and hypervisors
- Internet protocol suite
- Physical/network addressing
- Transport layer protocols
- Application layer protocols
- Wireless network protocols: LAN and PAN

Development Tech (tentative)

```
#!/bin/bash
# This is a basic bash script.
a=Hello
b="Good Morning"
c=16

echo $a
echo $b
echo $c
```

Jobs Market for Networking and Cyber Security Graduates

By 2025, automation and a new division of labor
between humans and machines will disrupt

85 million jobs

globally in medium and large businesses across 15
industries and 26 economies.

97 million new jobs

will be created by 2025 due to AI.

Career Path

Skills-to-Jobs Curriculum

A comprehensive portfolio

Networking

Gain hands-on, relevant networking skills

Programmable Infrastructure

Learn programming, infrastructure automation, and Internet of Things

Cybersecurity

Learn to secure and defend networks

Operating Systems and IT

Essential skills for the digital world

Programming

Learn to code in languages like Python, C, or C++

Practice

Interactive tools and experiences build real skills, not just knowledge

Cisco Certifications

N Chapter 08 Exam

Using Linux

- ❖ You can use [WSL](#) (windows subsystem for linux)

- ❖ If using a Mac, the standard Mac terminal will be perfect

NOTE: If you use the mac terminal then you are working and making changes to your actual OS

You could use any emulator/any virtualiser software & then install Linux on top of this

(= keeps your Linux completely separate from your work system)

- ❖ You could install [VirtualBox](#) & then install **Lubuntu** onto this

VirtualBox also won't install on a M1/M2 chip as they removed support for it

- ❖ You can use a UTM virtualiser (was created for macOS & only for Apple platforms)

- ❖ You can install Lubuntu on a Raspberry Pi (the SD card will hold everything)

My screenshots in the notes will be taken off my own Lubuntu that I've installed in VirtualBox

Semester 2 Assessment Schedule

Ethos

Focus on practical skills

Good idea to stay current with module:

- Some lectures will require reading/viewing of talks before.

Experiment/build something interesting:

- You will have the opportunity to propose your own assignment!

Which will you use?
